

Mobile Communication Systems

The unpredictable nature of an emergency necessitates that your organization always be prepared for the worst. A significant degree of that preparation lies in the ability to have complete coordination and communication solutions at your fingertips. An integrated emergency communication system can give you the power and scalability to tailor response planning to your unique concerns and create better response management.

KIS offers a flexible suite of communication management components that allows you to combine any or all of our solutions for **computer-aided dispatch, records management, mobile solutions, reporting and analysis, and forensic video analysis** into an integrated communication management system.

Governments rely on secure communications for critical mission support. KIS's flexible and redundant solutions ensure their reliability on various networks, satellite, broadband, and even dial up.

System components include:

FERRUPS
Tower UPS

Codec 6000

Explorer 727 / Explorer Link

Secure KVM
